

# The time has come!

Some of you were looking for this day as you have already decided and others are possibly dreading it as you have still did not made up your mind yet. But soon, you have to declare your major. We want you to spend a few more minutes thinking about your major before you press the button to submit your choice.

It would be a good start to check **programs' websites**.

FENS Programs [Choose "Undergraduate" tab under the heading of "Education"]:

- Computer Science and Engineering (<https://cs.sabanciuniv.edu/en>)
- Electronics Engineering (<https://ee.sabanciuniv.edu/en>)
- Industrial Engineering (<https://ie.sabanciuniv.edu/en>)
- Material Science and Nano Engineering (<https://mat.sabanciuniv.edu/en>)
- Mechatronics Engineering (<https://me.sabanciuniv.edu/>)
- Molecular Biology, Genetics and Bioengineering (<https://bio.sabanciuniv.edu/>)
- Data Science and Analytics (<https://fens.sabanciuniv.edu/en/dsa>)

FASS Programs [Choose "Undergraduate" tab under the heading of "Education"]:

- Economics (<https://econ.sabanciuniv.edu/en>)
- Political Science and International Relations (<https://pols.sabanciuniv.edu/en>)
- Psychology (<https://psy.sabanciuniv.edu/en>)
- Visual Arts and Visual Communication Design (<https://vavcd.sabanciuniv.edu>)

SBS Program [Choose "Undergraduate" tab under the heading of "Education"]:

- Management (<https://sbs.sabanciuniv.edu/en/academics/management-undergraduate-program>)

For one, make sure that you are aware of the **degree requirements**. Which courses are required?

How many core and area electives you have to take? On each program's webpage you can find an eight-semester course plan recommendation.

You may have decided on your major. Yet, each program has **many sub-fields**. Say you are planning to study computer science. Are you interested more on hardware or software? Are you more into networks or cyber security? Management could be your choice. In that case, what ticks you more? Marketing or finance or organizational behavior? May be, you want to be a generalist? If you are planning to study psychology, what interest you most? Cognitive or developmental psychology?

**Major Fest** provides you an opportunity to discuss these questions with expert faculty members of each and every program.

We should also emphasize that it will not hurt to spare a few minutes to **programs which you do not consider as your major**. Do you know what a material scientists do? Is it possible to have an unbreakable clarinet which produces high quality music using nanotechnology? Do economists worry only about interest rates or do they have a say whether yellow cabs or Uber is better for the society? What do you know about biology, visual arts and visual communication design, electrical engineering, political science and international relations, industrial engineering, mechatronics? Could any one of these programs be more interesting to you but you are not aware of?

If you have more questions and facing difficulty to make up your mind, please see your CIAD counselor (if you do not know who that is, please check MySU). If you have specific question for field experts

**We cordially invite you to all Major Fest sessions.**

As the Grail Knight in the movie Indiana Jones and the Last Crusade says:

“You must choose wisely!”
